**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 21 is a rejected under 35 U.S.C. 103(a) as being unpatentable over Campbell et al. (USPN 6,375,637), and further in view of Miyata et al. (USPN 5,711,754).

Campbell et al. discloses a catheter body, a balloon, a first layer of adhesive, a second layer of adhesive, a first and second retaining ring, and a distal retaining ring sleeve, but fails to teach explicitly teach a coupling member (See Figure 1B-1D, and column 5, lines 44-59 and entire reference).

Miyata et al. discloses a balloon catheter with a coupling member (see Figure 1).

At the time of the invention it would have been obvious for one of ordinary skill in the art to combine the teachings of Campbell et al. with Miyata et al. because it is well known in the art to have a coupling member being mounted on the proximal end of a catheter when dealing with more than one lumen, which is the case with balloon catheters.
